Skills

Industrial and Process

- Production flow analysis and process optimization
- Continuous improvement: Lean, VSM, TRS/OEE
- Process monitoring, performance tracking and standardization
- Root cause analysis: 5 Why, Ishikawa, PDCA, DMAIC

Digital and Data

- MES concepts: data integration, traceability, performance
- Industrial data collection: sensors, production systems, shopfloor data
- SQL / MySQL, Node-RED, Power BI, Advanced Excel
- Python/Matlab: data analysis, regression, process optimization

Professional Skills

- Cross-functional collaboration: production, IT, quality, maintenance
- Technical documentation, procedures and user support
- Operator training and communication
- Structured problem solving

QSE : ISO 9001, 14001, 45001

Office Pack

Interests

Football, Photography, Robotics

Espoir ATIVON

Industry 4.0 - Process & Digital Manufacturing

Industrial Engineering student with a strong focus on Industry 4.0, manufacturing digitalization and process optimization. Experienced in production monitoring, data analysis and process improvement, with hands-on work using industrial tools such as EVOCON. Combines industrial understanding (process, quality, performance) with digital skills (Python, data analysis, automation systems) to drive operational improvements and support MES integration projects.

Education

Engineering degree in Industrial Engineering

Since September 2025 [EILCO](#) Longuenesse
Joint degree program in Industrial Engineering and Digital Technologies with ENSAM - Rabat

General Studies Diploma in Mathematical and Computer Sciences

From September 2021 to June 2023
[Faculté des Sciences de Tétouan](#) Tanger-Tetouan-Al Hoceima, Morocco

Work experience

Industrial Process Optimization Intern in ceramic production

From July 2024 to August 2024
[Super Cerame](#) Tanger-Tetouan-Al Hoceima, Morocco

Monitoring and Optimization of Density, Viscosity and Residue

- Analyzed production parameters including density, viscosity and residue to improve process stability
- Developed a data-driven method to estimate the optimal timing for density control and adjustment.
- Reduced unnecessary manual checks by replacing repetitive 5-minute controls with targeted measurements before reaching the setpoint.
- Improved operator efficiency by reducing waiting time around the slurry tank and limiting unnecessary mixer interruptions.
- Used EVOCON to track performance and identify inefficiencies
- Supported data-driven decision-making in a demanding industrial production environment.
- Sensitivity to HSE requirements and demanding industrial environments

Quality & Process Structuring - Engineering Assistant Internship

From July 2025 to August 2025 [Université Mohammed V](#) Rabat, Morocco

Implementation of an ISO 21001 quality system

- Designed and structured internal quality processes aligned with ISO
- Created SIPOC diagrams, process sheets and procedures.
- Defined performance indicators and monitoring systems
- Deployment of a secure document management system.
- Contributed to continuous improvement and process standardization

Projects

Industrial Data Monitoring System: ESP32 and Node-RED

- Designed a system to **collect production data via sensors**
- Built dashboards displaying **TRS, production metrics and KPIs**
- Implemented **data storage with MySQL**
- Developed a **real-time monitoring architecture**

Process Simulation & Optimization - Kanban Simulation

- Developed a simulation model to optimize production flow and stock sizing
- Applied industrial engineering methods (flow, bottleneck analysis)

Production Management System - MSP process control

- Built a system to support production tracking and decision-making
- Focus on data structuring and operational visibility

Leadership & Activities

Communications Officer for the board game club

Les Joueurs de Dés/Cartes - EILCO Longuenesse 2025

Section captain, Togolese football team in Morocco

Tetouan - Morocco 2021-2023
